which gives each of them what they lack. In the vicinity of Lambuso, Pinigindu, Lemasong and Lugagun are sago swamps, which are relied upon in time of famine to support the people of the lower road, the owners then reaping large supplies of shell-money by selling the sago.

Dry spells from time to time produce food shortages, but as a rule these are apparently not very serious. In 1914 (?), however, no rain fell for about a year (?), and the people were in great distress. The whole country suffered from drought, and, excepting from the sago swamps, there was practically no food procurable. The period of drought and famine culminated in a series of destructive bush fires along the whole line of coast, bush and mountain ranges, and, from the graphic descriptions given to me, everything perished—wallabies, in fact, have scarcely been seen since. It is extremely probable that a great loss of life followed this period of famine. The natives said that only those with plenty of shell-money were able to keep themselves supplied with sago. People scattered far and wide, especially in the direction of Tabr, looking for food.

The natives now divide their time between work in their gardens and work on road maintenance, and it is possible that in some areas the demands of the road at times lead to neglect of garden work. The people of the mountain villages have villages on the coast, to which they come for a few days when their road services are due. I think this division of work and the areas for which the various villages are responsible should be made the subject of a special investigation by the district officials. Mr. Waugh, the District Officer, has in mind a scheme for the maintenance of a mobile road gang, with adequate transport facilities. If something of the kind were possible the natives could spend more time in their gardens and coco-nut groves.

HOUSING.

When I first went down the Kavieng road in 1924 most of the natives' houses were small, neat-looking, rectangular structures built on piles some feet above the ground. This was a standard pattern that had been introduced by the District Officials. On this occasion, however, I noticed that in most of the villages the people were living in their old type of house. Whether these are healthier than the introduced structures I cannot tell, but it seems to me much better to improve the structure they desire to live in than to force them to build houses which they will probably vacate as soon as the Government official's back is turned. The type of house, the erection of it, and everything connected with it, is definitely part of native culture and as such should be preserved as far as possible.
